RockSHIELD

STRATA CONTROL TECHNOLOGY

Geotechnical monitoring system for remote monitoring into the rockmass

Installing the RockSHIELD system:

- Automates monitoring - significant time savings, triggered alerts and safer work environment.
- Enables identification and quantification of timing, failure mode and depth of rock failure.
- Is complimentary to LiDAR and convergence monitoring.
- Records data and integrates with a range of 3rd party software applications including mXwrap.

- Plug and play with multi point borehole extensometers - easy installation, no grouting.
- WiFi connectivity or operate in local mode.
- Scalable - connect an array of instruments.
- Simple setup and commissioning.
- Configurable trigger thresholds and alerts.
- Tablet and web based software with intuitive user interface.
- Analysis in tabular or graphic format
