SmartSHEAR

Measure development of bedding plane shear

STRATA CONTROL TECHNOLOGY

- Accurately determine the location, timing, magnitude and sense of shear displacement in 3D.
- Sufficient resolution to resolve discrete bedding plane shear and strata failure surfaces.
- Fast installation in open boreholes.
- Easy activation of the mechanical anchors to monitor immediately.

- Cost effective routine shear monitoring.
- 3D interpretation of shear displacement.
- Fast and easy installation, no grouting required.
- Customisable design of bay lengths to suit application.
